

Haddon Township Water Supply System

Our Treatment Facilities Consist Of:

- **Aeration:** The process of bringing water and air into contact in order to remove dissolved gases which may be corrosive to our water supply.
- **Sedimentation:** The process of removing suspended matters such as iron and manganese by gravity settling.
- **Filtration:** Removing almost all suspended matter that remains by passing the water through a sand medium.
- **Corrosion Control:** The addition of a zinc phosphate to control scaling and deposits formation on water lines.
- **Air Stripping:** A tower aerator consisting of a cylindrical tank filled with a packing material. Water is distributed over the material at the top of the tank while air is forced through the bottom using a blower. The primary purpose of air stripping is to remove all traces of Volatile Organic Compounds.
- **Disinfection:** Chlorine is added as the final treatment before entering the water distribution system.

The Sewer Department

The Township maintains the wastewater collection system, which includes all underground sanitary and storm sewer lines. We also maintain two pumping stations.

Why Two Bills?

One of the most frequently asked questions presented to the Haddon Sewer Department is, “Why do we get two sewer bills?” Well, to answer that in a nutshell, one of the bills is for local sewer department (Township of Haddon) and the other is for the regional county authority. Let us explain a bit. Until the late 1980’s, Haddon’s wastewater was treated at a local sewage treatment plant operated by the Township of Haddon.

After that, Haddon was required to tie into the newly constructed Camden County regional system, which diverted our wastewater to a main plant in Camden. Our local plant was phased out. However, the task of maintaining our own street mains and pumping stations remained ours - the CCMUA simply treats the sewage. The fee paid to the Township of Haddon is utilized for the maintenance of our system and related facilities and upkeep and modernization of equipment. The fee paid to the CCMUA is for the treatment process of the sewage.

The Township of Haddon and the CCMUA are two totally different authorities and neither dictates to the other billing amounts or other procedures. We hope we have helped clarify some of the confusion regarding this question.

TO REPORT A WATER OR SEWER EMERGENCY

To report a problem during regular hours (Monday through Friday 7:00 am to 3:00 pm), please call (856) 854-1825 . During off hours, weekends or holidays, please call 609-820-8048.
